

First-Line Therapy for Endometriosis: A Courtroom Debate

The evidence takes the stand.

Character	Voice Over
Judge	Court is now in session. The case before us: first-line therapy for endometriosis—Dienogest or Elagolix. Dienogest, your defense. ^{1,2}
Lawyer 1 – Dienogest (Defendant)	Your honor, I am Dienogest, a trusted progestin. I suppress endometrial activity and reduce pelvic pain with continuous therapy. ^{1,2}
Judge	A strong defense, counsel. But this court demands full disclosure. Are there challenges?
Lawyer 1 – Dienogest (Defendant)	Yes, your honor. Early irregular bleeding may occur, and on record, nearly one-third of patients show progestin resistance. ^{1,2}
Judge	Elagolix, your argument.
Lawyer 2 – Elagolix (Challenger)	I am Elagolix, the first oral GnRH antagonist. ELARIS Phase III trials show reductions in dysmenorrhea, non-menstrual pelvic pain, and dyspareunia. And my evidence goes further — I am the first in the world to have active-control trial data against Dienogest in Indian patients, demonstrating non-inferiority in pain reduction. ¹
Lawyer 2 – Elagolix (Challenger)	I deliver rapid, dose-dependent estradiol suppression without flare. And on this evidence, FOGSI has recognised me as an emerging, potential first-line therapy for moderate-to-severe endometriosis-associated pain. ¹
Judge (to doctor)	Doctor, the court now awaits your verdict.
